Functions of a Complex Variable I - College of Charleston

61 Complex Algebra 323 and the angle $\theta (= \tan^{-1}(y/x))$ is labeled the argument or phase of z Using a result that is suggested (but not rigorously proved) by Section 56, we have the very useful polar representation $z = rei\theta$ (610) In order to prove this identity, we use $i^3 = -i$, $i^4 = 1$, etc in the Taylor expansion of the exponential and trigonometric functions and separate even
