14|Complex Variables 3 Necessarily if f is analytic at z_0 it will also be analytic at every point within the disk $|z - z_0| < r$. This follows because at any point z_1 within the original disk you have a disk centered at z_1 and of radius $r/2$ on which the function is differentiable. The common formulas for differentiation are exactly the same for complex variables as

Functions of a Complex Variable I

transforming complex variables permits us to create a (curved) coordinate system tailored to the particular problem. Second, complex numbers are constructed (in Section 61) from pairs of real numbers so that the real number field is embedded naturally in the complex number field. In mathematical terms, the complex number field is an

COMPLEX ANALYSIS: SOLUTIONS 5.3 For the triple pole at $z = 0$ we have $f(z) = \frac{1}{z^3} + O(z)$ so the residue is $\frac{1}{2} = \frac{1}{2}$. Finally, the function $f(z) = \frac{1}{z^m(1-z)^n}$ has a ...
