8 A big metal bead slides due to gravity along an upright friction-free wire. It starts from rest at the top of the wire as shown in the sketch. How fast is it traveling as it passes Point B? Point D? Point E? At what point does it have the maximum speed? 9 Rows of wind-powered generators are used in various windy locations to generate

Concept-Development 6-4 Practice Page

Concept-Development 6-4 Practice Page 1 The weight of the block is represented by vector W . We show axes parallel and perpendicular to the surface of the inclined plane. 2 W has a component parallel to the surface (bold vector). Acceleration down the incline is due to this component. 3 W also has a component perpendicular to the surface.
