Chapter 20: Entropy and the Second Law of Thermodynamics

The Second Law of Thermodynamics For the free expansion, we have $\Delta S > 0$ It is an irreversible process in a closed system For the reversible isothermal process, for the gas $\Delta S > 0$ for expansion and $\Delta S < 0$ for compression However, the gas itself is not a closed system It is only a closed system if we include both the gas and the reservoir

Chapter 17. Work, Heat, and the First Law of Thermodynamics

The First Law of Thermodynamics Work and heat are two ways of transferring energy between a system and the environment, causing the system's energy to change If the system as a whole is at rest, so that the bulk mechanical energy due to translational or rotational motion is zero, then the
